EDUCATION

Milwaukee School of Engineering — Expected Graduation May 2021
B.S. Software Engineering — Milwaukee, WI
Minor in Mathematics — Relevant Coursework:
GPA: 3.4 — Network Protocols, Data Structures,
Major GPA: 3.8 — Software Engineering Tools and Practices

SKILLS

- Programming: C++, C#, HTML/CSS, Java, Node.js, SQL, NGINX, Python, ReactJS, Webpack
- Development Tools: Bash, Docker, Git, JetBrains IDEs, JIRA, NPM, UML Diagrams, Trello

EXPERIENCE

Wickidcool Software — November 2018 - Present
Software Development Intern — Sussex, WI

- Utilized Git to collaborate with other developers to minimize merge conflicts and implement features simultaneously, improving productivity and reduced development timeline.

Eventezze – Event Management Project

- Collaborated in development for the front-end using ReactJS and Redux to handle data received from the Node.js back-end of the application, populating it with data from other event services.
- Created and altered database tables to store various data for a user's event obtained from various other event sites using their APIs, allowing for the publishing of an event to multiple services instantly.

MSOE Information Technology — March 2018 – November 2018
Web Services Student Worker — Milwaukee, WI

- Facilitated content change requests with for the primary university site to improve branding and styling.
- Collaborated with other IT teams to investigate existing tickets to resolve issues for college staff.
- Revised CSS for the MSOE Blackboard website, improving the layout and responsiveness for mobile users.

Hamilton High School Charger Robotics — September 2015 – August 2017
Application Development Lead — Sussex, WI

- Trained new members to have basic web client-server understanding, allowing them to independently contribute to the project with newly gained skills and comprehension.
- Designed a new architecture for the application with industry mentors to improve its performance and maintainability for the future members of the department.

PROJECTS

Software Engineering Tools and Practices Class Project — September 2018 – November 2018
Google GTFS Static Bus Tracker — Milwaukee, WI

- Created extensive UML diagrams for concisely representing class relationships for the application design, to optimize the implementation of the program amongst the student development team.
- Assisted development for a JavaFX application to import static GTFS files, using Observer design pattern for pushing changes made to the parsed data from the subject to the observing objects.
